Data Sheet - Enterprise

Data security is of utmost importance as it is the lifeline of any organization and critical for maintaining business continuity. Backing up all of your organization's data is a big job. The risk of losing data on any device can mean disaster for your business. From backing up your servers to making your data accessible across a network of computers, smartphones and tablets, IDrive eases enterprise-level backup from beginning to endpoint. IDrive is an online backup service that supports backup from multiple PCs, Macs, Servers, Android, and iOS devices to a single cloud account. Online backup is easy, takes less time to configure. Once backed up, you can securely access all your files from anywhere.

Why IDrive for your enterprise?

- Backup multiple devices into a single account.
- Backup support for desktops, laptops, mobiles, and servers.
- Hybrid Backup - secure files to local drives for faster restore.
- Manage backups of all your remote computers via web based console.
- Create multiple accounts using your storage space.
- Robust management console and reporting tools.
- Restore multiple file versions of backed up files.
- Easy installation and setup - takes only seconds.
- Business compliance assistance- HIPAA, SOX, GLBA, SEC/NASD

End-to-End data protection

Multiple Device Backup

One stop solution to protect all of your PCs, Macs, iPhones, iPads, and Android devices into a single account!

Server Backup

IDrive backs up your MS SQL Server, MS Exchange Server, Hyper-V, VMware, MS SharePoint Server, Oracle Server and Linux Servers with zero downtime!

IDrive Express™

Backup or retrieve data, within a week, using physical shipment of temporary storage devices.

Compliance

IDrive assists small and emerging businesses within the medical, accounting, financial, and legal professions to comply with legal and federal regulations like HIPAA, SOX, GLBA, SEC/NASD.

Hybrid Backup

Local backup is a complementary solution to online backup. While online backup allows you to access your data from anywhere, local backup ensures faster backups and restores.

Data Center Backup

IDrive makes it easy for Enterprises to connect to their local and remote Linux servers, and back them up using a secure browser-based solution.

Enterprise Grade Security

All your data is encrypted using 256-bit AES encryption during transfer and storage. On signup, you can choose a private encryption key (known only to you), to maintain utmost data confidentiality.

Explore the Dashboard

Manage backups of all your remote computers with robust reporting tools with near real-time response from the centralised console.

Users/Groups

Admin can create multiple users, assign them admin control and organize them into groups. Using Dashboard, Admin can manage and propagate settings for users or groups.

Settings

Admin can propagate settings for all connected devices in one go and lock particular settings for a user or group of users. Admin can also create policies with required settings and propagate them for connected groups.

Computers

Through the 'Computers' tab view all the devices attached to your account in one screen. Remotely manage your computer settings, its backup set and schedule.

Legal Hold

Legal hold is a process which allows the admin to block a user account. The user will not be able to access his account, but Admin can actively access the account and download data.
